Amendment filed: January 21, 2005

Applic. No. 09/317,719 Art Unit 2871

Page 3 of 25

AMENDMENTS TO THE CLAIMS:

1. (Currently Amended) A liquid crystal display comprising:

a first panel including a common electrode extending in a horizontal

direction along a surface of the first panel and having an outer edge running

substantially perpendicular to the horizontal direction; and

a second panel coupled to the first panel and spaced from the first panel,

the second panel including a pad having an edge facing the substantially

perpendicular first panel outer edge, the pad extending in the horizontal

direction along a surface of the second panel, the facing edge of the pad being

spaced apart from the substantially perpendicular edge of the first panel in the

horizontal direction by a desired distance.

2. (Original) The liquid crystal display according to claim 1, wherein the

pad is a gate pad.

3. (Original) The liquid crystal display according to claim 1, wherein the

pad is a source pad.

4. (Original) The liquid crystal display according to claim 1, wherein the

common electrode extends along an entire horizontal surface of the first panel.

Amendment filed: January 21, 2005

Art Unit 2871 Page 4 of 25

Applic. No. 09/317,719

5. (Original) The liquid crystal display according to claim 1, wherein the

pad is spaced from an edge of the first panel in the horizontal direction,

wherein the edge of the first panel is the edge of first panel that is located

closest to the pad.

6. (Original) The liquid crystal display according to claim 1, wherein said

common electrode is made of Indium Tin Oxide.

7. (Original) The liquid crystal display according to claim 1, further

comprising a passivation layer on the second panel and a cut protection

member is provided on the second panel for protecting the passivation layer

during a cutting process of the LCD.

8. (Original) The liquid crystal display according to claim 7, wherein the

cut protection member is made of Indium Tin Oxide.

9. (Original) The liquid crystal display according to claim 1, wherein the

pad is a gate pad, the liquid crystal display further comprising a gate bus line

connected to the gate pad, a source pad, a source bus line connected to the

source pad, a thin film transistor having a gate electrode extending from the

gate bus line, a source electrode extending from the source bus line, a drain

Page 5 of 25

electrode facing the source electrode and a pixel electrode connected to the

drain electrode.

10. (Original) The liquid crystal display according to claim 1, wherein the

pad is a source pad, the liquid crystal display further comprising a gate pad, a

gate bus line connected to the gate pad, a source bus line connected to the

source pad, a thin film transistor having a gate electrode extending from the

gate bus line, a source electrode extending from the source bus line, a drain

electrode facing the source electrode and a pixel electrode connected to the

drain electrode.

11. (Currently Amended) A liquid crystal display comprising:

a first panel including a common electrode extending in a horizontal

direction along a surface of the first panel and having an outer edge running

substantially perpendicular to the horizontal direction; and

a second panel coupled to the first panel and spaced from the first panel,

the second panel including a pad terminal having an edge facing the

substantially perpendicular first panel outer edge, the pad terminal extending

in the horizontal direction along a surface of the second panel, the facing edge

of the pad terminal being spaced apart from the substantially perpendicular

edge of the first panel in the horizontal direction by a desired distance.

Amendment filed: January 21, 2005

Art Unit 2871

Applic. No. 09/317,719

Page 6 of 25

12. (Original) The liquid crystal display according to claim 11, wherein

the pad terminal is a gate pad terminal.

13. (Original) The liquid crystal display according to claim 11, wherein

the pad terminal is a source pad terminal.

14. (Original) The liquid crystal display according to claim 11, wherein

the common electrode extends along an entire horizontal surface of the first

panel.

15. (Original) The liquid crystal display according to claim 11, wherein

the pad terminal is spaced from an edge of the first panel in the horizontal

direction, wherein the edge of the first panel is the edge of the first panel that is

located closest to the pad terminal.

16. (Original) The liquid crystal display according to claim 11, wherein

said common electrode and said pad terminal are made of Indium Tin Oxide.

17. (Original) The liquid crystal display according to claim 11, further

comprising a passivation layer on the second panel and a cut protection

member is provided on the second panel for protecting the passivation layer

during a cutting process of the LCD.

18. (Original) The liquid crystal display according to claim 17, wherein

the cut protection member is made of Indium Tin Oxide.

Amendment filed: January 21, 2005

Applic. No. 09/317,719 Art Unit 2871

Page 7 of 25

19. (Original) The liquid display according to claim 11, wherein the pad is

a gate pad, the liquid crystal display further comprising a gate bus line

connected to the gate pad, a source pad, a source bus line connected to the

source pad, a thin film transistor having a gate electrode extending from the

gate bus line, a source electrode extending from the source bus line, a drain

electrode facing the source electrode and a pixel electrode connected to the

drain electrode.

20. (Original) The liquid display according to claim 11, wherein the pad is

a source pad, the liquid crystal display further comprising a gate pad, a gate

bus line connected to the gate pad, a source bus line connected to the source

pad, a thin film transistor having a gate electrode extending from the gate bus

line, a source electrode extending from the source bus line, a drain electrode

facing the source electrode and a pixel electrode connected to the drain

electrode.

21. (Amended) A liquid crystal display comprising:

a first panel including a first ITO layer extending in a horizontal direction

along a surface of the first panel and having an outer edge running

substantially perpendicular to the horizontal direction; and

a second panel coupled to the first panel and spaced from the first panel,

the second panel including a second ITO layer having an edge facing the

substantially perpendicular first panel outer edge, the second ITO layer

Amendment filed: January 21, 2005

Applic. No. 09/317,719 Art Unit 2871

Page 8 of 25

extending in the horizontal direction along a surface of the second panel, the

facing edge of the second ITO layer being spaced apart from the substantially

perpendicular first panel outer edge in the horizontal direction by a desired

distance.

22. (Original) The liquid crystal display according to claim 21, wherein

the first ITO layer is a common electrode and the second ITO layer is a pad

terminal.

23. (Original) The liquid crystal display according to claim 22, wherein

the pad terminal is a gate pad terminal.

24. (Original) The liquid crystal display according to claim 22, wherein

the pad terminal is a source pad terminal.

25. (Original) The liquid display according to claim 22, wherein the

common electrode extends along an entire horizontal surface of the first panel.

26. (Original) The liquid crystal display according to claim 22, wherein

the second ITO layer is spaced from an edge of the first panel in the horizontal

direction, wherein the edge of the first panel is the edge of the first panel that is

located closest to the second ITO layer.

Amendment filed: January 21, 2005

Applic. No. 09/317,719 Art Unit 2871

Page 9 of 25

27. (Original) The liquid crystal display according to claim 22, further

comprising a passivation layer on the second panel and a cut protection

member is provided on the second panel for protecting the passivation layer

during a cutting process of the LCD.

28. (Original) The liquid crystal display according to claim 27, wherein

the cut protection member is made of Indium Tin Oxide.

29. (Original) The liquid crystal display according to claim 21, further

comprising a gate pad, a gate bus line connected to the gate pad, a source pad,

a source bus line connected to the source pad, a thin film transistor having a

gate electrode extending from the gate bus line, a source electrode extending

from the source bus line, a drain electrode facing the source electrode and a

pixel electrode connected to the drain electrode.

30. (Original) The liquid crystal display according to claim 29, further

comprising a gate pad, a gate bus line connected to the gate pad, a source pad,

a source bus line connected to the source pad, a thin film transistor having a

gate electrode extending from the gate bus line, a source electrode extending

from the source bus line, a drain electrode facing the source electrode and a

pixel electrode connected to the drain electrode.

Öffice Action dated: September 21, 2004 Applic. No. 09/317,719
Amendment filed: January 21, 2005 Art Unit 2871

Page 10 of 25

31. (Original) A method for manufacturing a liquid crystal display comprising steps of:

forming a first panel including a common electrode;

forming a second panel including a pad;

joining the first panel and the second panel together such that the first panel is spaced from the second panel;

inserting a liquid crystal between the first panel and the second panel; and

cutting a portion of the first panel covering the pad in order to expose the pad so that the pad does not overlap with the common electrode.

- 32. (Original) The method according to claim 31, wherein the common electrode is formed along an entire horizontal surface of the first panel.
- 33. (Original) The method according to claim 31, wherein the pad is a gate pad.
- 34. (Original) The method according to claim 31, wherein the pad is a source pad.

Amendment filed: January 21, 2005

Applic. No. 09/317,719 Art Unit 2871

Page 11 of 25

35. (Original) The method according to claim 31, further comprising the

step of forming a cut protection member on the second panel for protecting the

liquid crystal display during the cutting step.

36. (Currently Amended) The method of claim 31, wherein after the

cutting step, the pad is spaced apart from an edge of the first panel in a

horizontal direction, the edge of the first panel being the an edge of the first

panel that is located closest to the pad.

37. (Original) The method according to claim 31, wherein the pad is a

gate pad, the method further comprising the steps of forming a gate bus line

connected to the gate pad, forming a source pad, forming a source bus line

connected to the source pad, forming a thin film transistor having a gate

electrode extending from the gate bus line, forming a source electrode

extending from the source bus line, forming a drain electrode facing the source

electrode and forming a pixel electrode connected to the drain electrode.

38. (Original) The method according to claim 31, wherein the pad is a

source pad, the method further comprising the steps of forming a gate pad,

forming a gate bus line connected to the gate pad, forming a source bus line

connected to the source pad, forming a thin film transistor having a gate

electrode extending from the gate bus line, forming a source electrode

Amendment filed: January 21, 2005

extending from the source bus line, forming a drain electrode facing the surface

electrode and forming a pixel electrode connected to the drain electrode.

39. (Original) A method for manufacturing a liquid crystal display

comprising steps of:

forming a first panel including a common electrode;

forming a second panel including a pad terminal;

joining the first panel and the second panel together such that the

first panel is spaced from the second panel;

inserting a liquid crystal between the first panel and the second

panel; and

cutting a portion of the first panel covering the pad terminal in

order to expose the pad terminal so that the pad terminal does not overlap with

the common electrodes.

40. (Original) The method according to claim 39, wherein the common

electrode is formed along an entire horizontal surface of the first panel.

41. (Original) The method according to claim 39, wherein the pad

terminal is a gate pad terminal.

Amendment filed: January 21, 2005

Art Unit 2871 Page 13 of 25

Applic. No. 09/317,719

42. (Original) The method according to claim 39, wherein the pad

terminal is a source pad terminal.

43. (Original) The method according to claim 39, further comprising the

step of forming a cut protection member on the second panel for protecting the

liquid crystal display during the cutting step.

44. (Original) The method of claim 39, wherein after the cutting step, the

pad terminal is spaced apart from an edge of the first panel in a horizontal

direction, the edge of the first panel being the edge of the first panel that is

located closest to the pad terminal.

45. (Original) A method for manufacturing a liquid crystal display

comprising steps of:

forming a first ITO layer on a first panel;

forming a second ITO layer on a second panel;

joining the first panel and the second panel together such that the

first panel is spaced from the second panel;

inserting a liquid crystal between the first panel and the second

panel; and

cutting a portion of the first panel covering the second ITO layer on

the second panel so that the first and second ITO layers do not overlap with

each other.

46. (Original) The method according to claim 45, wherein the first ITO

layer defines a common electrode.

47. (Original) The method according to claim 46, wherein the common

electrode is formed along an entire horizontal surface of the first panel.

48. (Original) The method according to claim 45, wherein the second ITO

layer defines a gate pad terminal.

49. (Original) The method according to claim 45, wherein the second ITO

layer defines a source pad terminal.

50. (Original) The method according to claim 45, further comprising the

step of forming a cut protection member on the second panel for protecting the

liquid crystal display during the cutting step.

51. (Original) The method according to claim 50, wherein the cut

protection member is formed on the second ITO layer on the second panel.

Amendment filed: January 21, 2005

Applic. No. 09/317,719 Art Unit 2871

Page 15 of 25

52. (Original) The method of claim 45, wherein after the cutting step, the

second ITO layer is spaced apart from an edge of the first panel in a horizontal

direction, the edge of the first panel being the edge of the first panel that is

located closest to the second ITO layer.
